fine art scanning beyond belief

callprint services

reprographics

- B/W copying
- colour copying
- large format colour
- CAD prints
- print finishing
- mounting & encapsulation

display print

- exhibition graphics
- window graphics
- banner prints
- vehicle graphics
- outdoor display
- pop-up & banner stands

document management

- electronic file distribution
- document fulfilment
- document web submission

software solutions

- 3To web services
- DFS/DFM
- PDM
- sepialine
- file trans

digital printing

- brochure & report production
- stationery
- flyers & handouts
- variable data
- packaging
- photo books

scanning

- large format scanning
- archival scanning
- document scanning
- small format scanning

specialist

- 3D model printing
- design
- lithographic
- PFI bid production

support

- I.T. support
- machine & media sales
- on-site facilities

brochures are available for all of these services, please contact us for more information.

archival scanning

Callprint also provides a full scanning facility for the archiving of legal documents. Colour or black and white documents of all sizes can be scanned and saved to various file formats and media.

introduction

Offering a wide range of scanning technology and expertise, Callprint has a huge amount of knowledge and experience in this area. From high volume literature to fine art replication we utilise our cutting edge equipment to provide the best solution for you.

small format scanning

Using our technology and expertise we aim to get the best from your scan. We can produce vibrant colour and extreme detail in all our flatbed scans.

- + flat bed scanner formats; positives, negatives, photos or APS film
- + cataloguing into a digital library on CD or DVD
- + image manipulation and air-brushing service available
- + capable of scanning objects up to 225cm long x 150cm wide x 40cm high

archival scanning

Fast and efficient transfer of your hard copy into the digital realm, designed to make your hard copy storage and retrieval problems disappear.

- + black and white or colour large format scanning 914mm x 3000mm
- + small format scanning up to A3
- + digital filing can take away storage issues

document scanning

Translate your scanned document back into type-editable text using OCR (Optical character recognition) scanning technology. This allows for text searches and editing.

- + large or small format scans can be used
- + edit or use text only held as hard copy
- + allows large documents to be easily filtered using searches

large format 32bit colour scanning

the largest flatbed, high resolution colour scanner in the UK

When you are dealing with unique pieces of art or rare antiquities, there can be no second best. At Callprint we have installed the largest flatbed, high resolution colour scanner in the UK, which is capable of scanning objects measuring up to 225cm long x 150cm wide x 40cm high, at a maximum resolution of 10,000 x 15,000 pixels.

- + 36 bit scans, producing very high definition digital files
- + artifacts up to 40cm high can be scanned

- + scan originals up to 225cm x 150cm x 40cm
- + scans will retain the 3D optical characteristic from the surface of the original

unique elements

3D characteristics

Callprint's scanner uses a unique system comprising of a motorised vacuum table and lighting effects which move independently of the fixed position lens, the lens can also angle itself up to 15 degrees. This system allows us to control the scanning area more closely than previously possible. Our scans are truly representative of the original, displaying amazing definition, even from contoured surfaces, maintaining the 3 dimensional optical characteristics, and capturing the full extent of the surface relief. Given this, where normally your only option has been photography, Callprint can offer an alternative option, without compromising quality but giving the advantage of improved turnaround time and reduced costs.

protection against light

To protect fragile and irreplaceable objects from exposure to excessive amounts of UV light, the scanned items are exposed to a fixed light beam which covers 5cm/sec and only exposes the area which is being scanned at any time. This exposes the object too less than 1/10th the light of other scanners. The light is also nearly UV free.

safety of origination

The safety of all items to be scanned is of paramount importance. Framed and glazed pictures can now be scanned without being removed from their frames and with no detrimental effect to the final scan.

available for hire

Our Cruse scanner is also available for hire, if you wish to create compilation artwork on the vacuum table, which can then be scanned directly into a high-resolution digital file.

Using a flat bed camera scanner in a controlled environment, with motorised lens and full lighting effects, allows the full definition and effects of the scanned item to be truly representative when the scan is compared to the original.

'together we make it happen'.
